

OneCalendar (Android) – Setup Guide for CalDAV Calendar Integration

❖ Step-by-Step Instructions :

1. Install the OneCalendar App

- Open the **Google Play Store**.
- Search for **OneCalendar**.
- Tap **Install** to download the app.

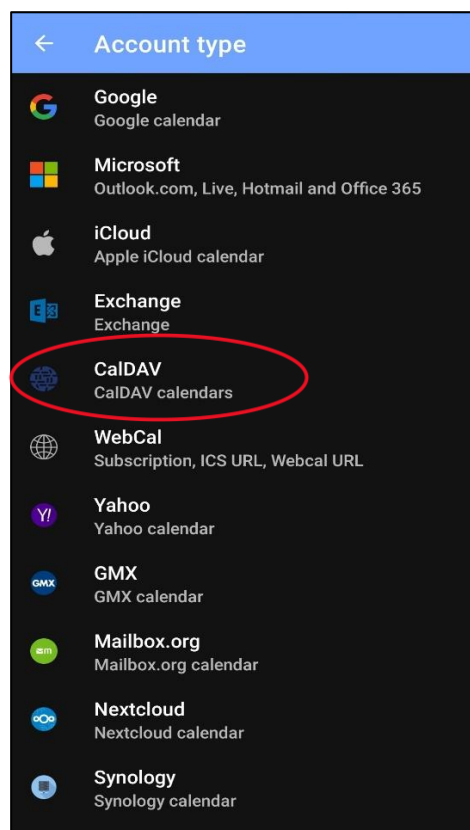

2. Obtain Your CalDAV Calendar URL

- a. Log in to URL = <https://caldav.mail25.info/>
- b. Find or Create the Calendar URL

3. Open OneCalendar

- Launch the **OneCalendar** app on your Android device.

Note: On first launch, OneCalendar will immediately prompt you to **add an account** — no need to open settings.

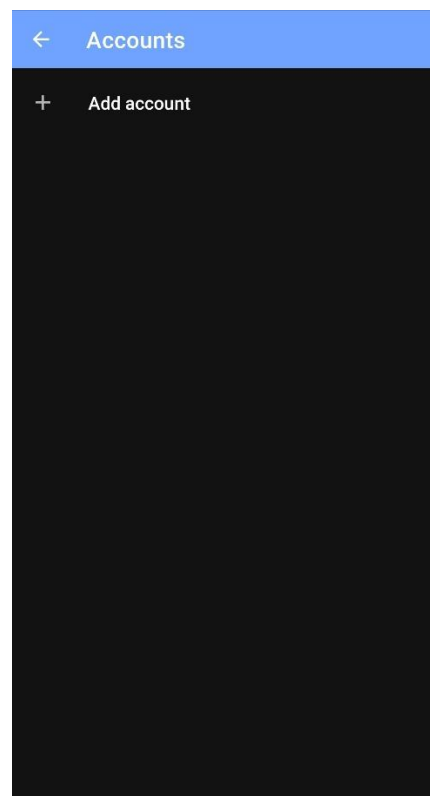

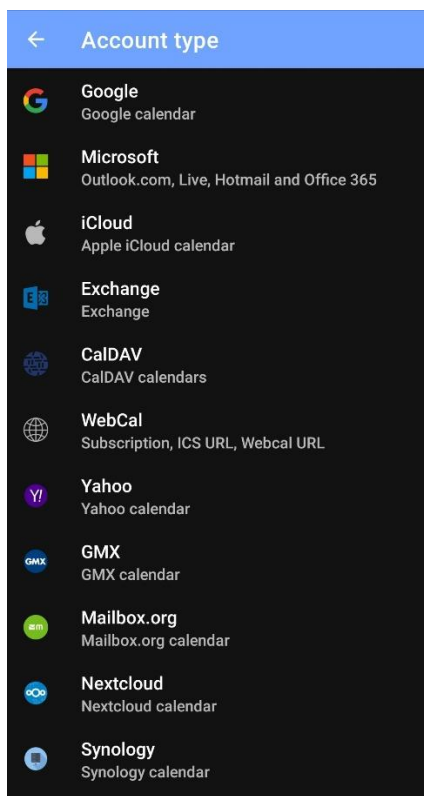

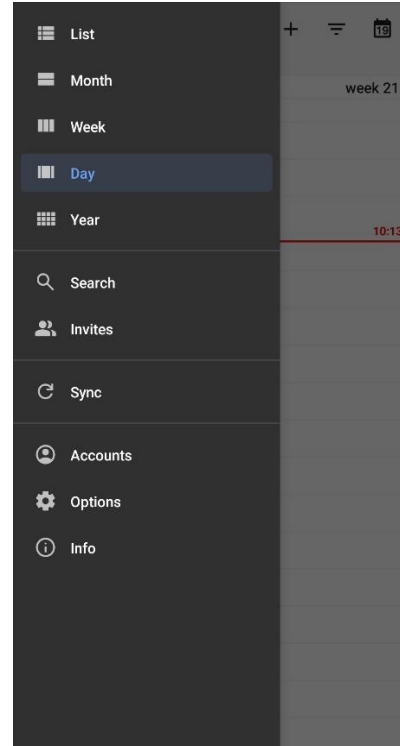

4. Select “CalDAV” as Account Type

- From the list of services (Google, Outlook, etc.), scroll down and tap **CalDAV**.

If you've already used One Calendar before, follow these steps:

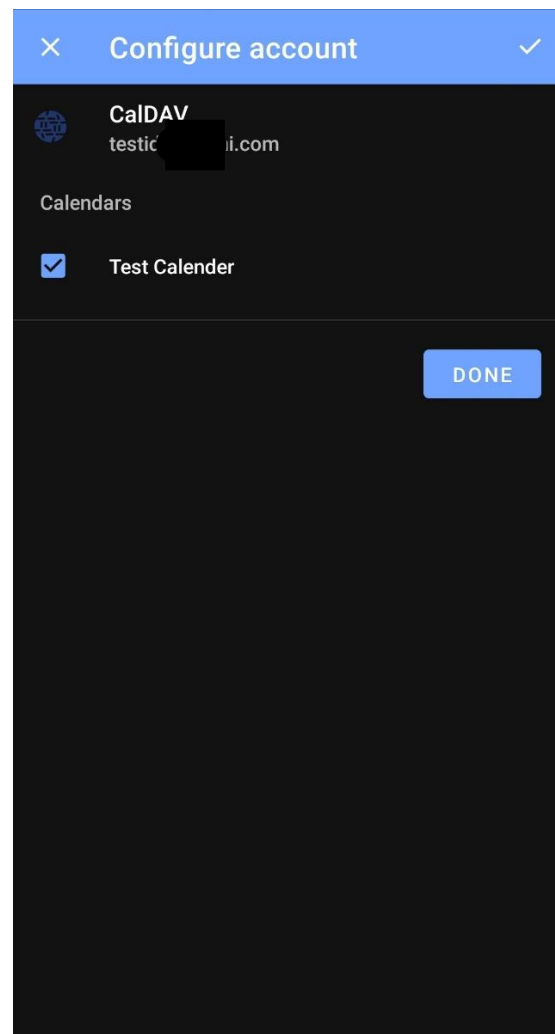

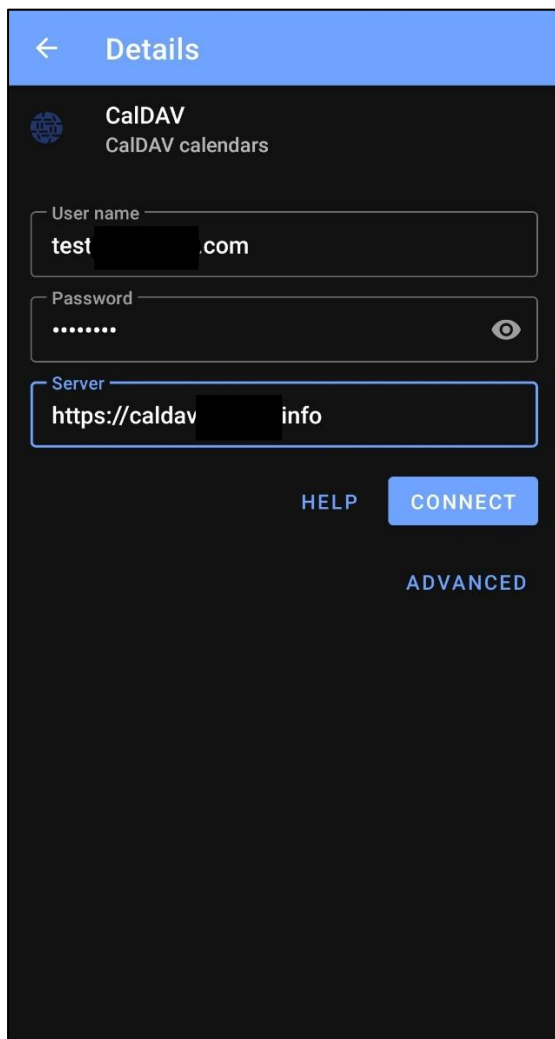

- Open the One Calendar app.
- Tap the menu icon (usually three horizontal lines or dots).
- Select Accounts.
- Tap Add Account.
- Choose CalDAV from the list.

5. Enter Your CalDAV Account Details

Fill out the form:

- **Username:** Your CalDAV account username (usually your email).
- **Password:** Your password
- **Server:** <https://caldav.mail25.info/>
- Click on **Connect**.
- ☒ **Important:** After entering valid details, **OneCalendar** will automatically detect and display your available **CalDAV calendars** in the next screen.

6. (Optional) Use Advanced Settings

If calendars are not auto-detected:

- Tap **Advanced**.
- Change **Server URL Type** to **Fully Qualified URL**.
- Paste the exact calendar URL in **Server** field and click on **Connect**.
